SUMMARY

Entry-Level Software Engineer with hands-on experience developing software applications, backend systems, REST APIs, and data-driven solutions using Java, Python, Spring Boot, SQL, JavaScript, and AWS. Strong foundation in object-oriented programming, data structures, software development lifecycle, and Agile delivery. Experienced writing SQL queries, joins, filtering datasets, building APIs, and supporting cloud-based systems. Proven ability to learn quickly, solve technical problems, and collaborate effectively in fast-paced engineering teams.

SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL

Backend: Spring Boot, Node.js, FastAPI, REST APIs, JSON, Microservices

Databases: PostgreSQL, MySQL, MongoDB, Redis

Messaging: Apache Kafka, RabbitMQ

Cloud/DevOps: AWS, Azure (Foundational), Docker, CI/CD Pipelines, Linux

Tools: Git, GitHub, Postman, Jira, OpenAPI/Swagger, Maven, NPM

Testing: JUnit, Mockito, Pytest, Unit Testing, Integration Testing

Concepts: OOP, Data Structures, Data Handling, SDLC, Agile / Scrum, Code Reviews, Problem Solving

Data: SQL Queries, Joins, Filtering, ETL Pipelines, Reporting Workflows

EXPERIENCE

Software Developer (Contract),

Remote | 09/2025 - Present

- Developed backend application components and full-stack features using Java, Spring Boot, React, and REST APIs.
- Wrote SQL queries, joins, and filtered datasets to support reporting and operational workflows.
- Built and maintained JSON-based API integrations for internal systems.
- Supported CI/CD pipelines, deployments, and release activities in Agile environments.
- Used Git workflows including commit, push, pull requests, and peer code reviews.
- Diagnosed and resolved production issues using logging, monitoring, and debugging tools.
- Collaborated with QA, developers, and stakeholders to deliver reliable software solutions.

PROJECTS

Backend Video Processing System | Java, Spring Boot, JWT, AWS, Kafka, SQL, Microservices

Repo Link: https://github.com/jeet7122/streaming_platform

- Developed Java-based microservices and REST APIs for upload, authentication, metadata, and system workflows following SDLC best practices.
- Designed asynchronous processing pipelines and data handling workflows using Kafka and optimized algorithms for task scheduling.
- Wrote SQL queries, joins, and filtering logic for reporting, metadata retrieval, and operational analytics.
- Performed unit testing, integration testing, and API validation to improve system reliability and release quality.
- Improved throughput by 4x and reduced latency by 60% through optimized processing and efficient resource utilization.
- Containerized services using Docker and deployed on AWS cloud infrastructure.
- Added logging, monitoring, resiliency, debugging workflows, and structured exception handling.

ATS Resume Intelligence Platform | Python, FastAPI, LangChain, Gemini AI, PostgreSQL, React

Repo Link: https://github.com/jeet7122/ats_resume_intelligence_platform

- Built full-stack web application with REST APIs, PostgreSQL data storage, and reporting dashboards.
- Developed backend services for file processing, structured outputs, and recommendation workflows using scoring algorithms.
- Wrote SQL queries, joins, and filtering logic for data retrieval, analytics views, and reporting workflows.
- Built responsive React dashboards for user insights, workflow management, and data visualization.
- Implemented RAG pipeline using ChromaDB to retrieve job descriptions and resume examples.
- Integrated Gemini AI and LangChain workflows for summarization, keyword enhancement, and bullet rewriting.
- Performed unit testing, API testing, debugging, and defect resolution to ensure stable releases.
- Applied Agile development practices, version control, and iterative feature enhancements.

Distributed Code Execution Platform – Java, Node.js, Kafka, Docker

Repo Link: https://github.com/jeet7122/code_execution_platform

- Developed distributed backend platform for concurrent processing workloads using object-oriented design principles.
- Built asynchronous job queues, scalable task pipelines, and scheduling algorithms for efficient execution.
- Developed secure execution services, validation layers, and API orchestration.
- Performed unit testing, integration testing, and API validation to improve platform stability.
- Used Git workflows, debugging techniques, and SDLC practices throughout development lifecycle.

EDUCATION

Diploma in Computer Programming - St. Clair College - Zekelman School of Information Technology | Graduated 2026

Relevant Coursework: Data Structures and Algorithms, System Design, OOP, Networking, Concurrency
