

# JEET THAKKAR

Software Developer | Java | Spring Boot | Backend & Cloud

Windsor, ON, Canada | [jeetthakkar2612@gmail.com](mailto:jeetthakkar2612@gmail.com) | [github.com/jeet7122](https://github.com/jeet7122) | [jeet7122.github.io](https://jeet7122.github.io) | [bridgecity-solutions](https://bridgecity-solutions.com)

## PROFESSIONAL SUMMARY

---

Software Developer with hands-on experience building backend and full-stack applications using Java, Spring Boot, PostgreSQL, and modern cloud tools. Strong interest in backend architecture, distributed systems, and scalable API design, with multiple deployed projects involving authentication, databases, caching, and asynchronous processing.

## CORE TECHNICAL SKILLS

---

**Programming Languages:** Java, TypeScript, JavaScript, SQL

**Backend Development:** Spring Boot, REST API Design, Next.js API Routes, Apache Kafka, Asynchronous Processing

**Database and Caching:** PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Cloudflare R2

**Architecture & Design:** Distributed Systems, Event-Driven Architecture, Microservices, Backend-for-Frontend (BFF), Layered Architecture

**Authentication & Security:** JWT Authentication, RBAC Authorization, Spring Security

**Cloud & DevOps:** Docker, Oracle Cloud VM, AWS (S3/EC2), CI/CD Workflows, Linux

**Testing & Observability:** JUnit, Mockito, Prometheus, Grafana

**Tools:** Agile / Scrum, GitHub, Postman

**Core Concepts :** Data Structures & Algorithms, Concurrency, System Design

## ENGINEERING EXPERIENCE

---

### Backend Developer | Bridge-City Solutions (Contract)

#### Jessica Marketing & Consulting | 2026 - Present

- Designed and implemented backend services using Java and Spring Boot for internal workflow automation.
- Built REST APIs with PostgreSQL database integration and optimized queries for faster response times.
- Implemented JWT authentication and role-based authorization using Spring Security.
- Wrote unit and integration tests using JUnit and Mockito to improve code reliability.
- Designed layered backend architecture to support future feature expansion.
- Deployed backend services on cloud VM and configured production environment.

### Full Stack Developer – BridgeCity Solutions (Contract)

#### Resinique Artistry | 2025 | [LIVE](#)

- Accomplished a production-ready e-commerce platform as measured by successful processing of real customer transactions, by doing the architecture of backend services for product lifecycles and transactional operations.
- Designed relational database schema for products, order requests, and users.
- Accomplished secure customer and admin access as measured by encrypted session handling, by doing the implementation of JWT-based authentication and session-based authorization flows.
- Accomplished real-time operational transparency as measured by instantaneous staff notifications, by doing the integration of asynchronous webhook pipelines and system Observability patterns.

## SELECTED ENGINEERING PROJECTS

---

### Cloud-Vault | Event-Driven Cloud Storage Platform | [REPO](#) | [LIVE](#)

**Technologies:** Java, Spring Boot, Next.js, Apache Kafka, PostgreSQL, Cloudflare R2, Docker, Oracle Cloud VM, Vercel

- Engineered a cloud-native image storage platform supporting secure upload, preview, and gallery management.
- Refactored backend from a monolithic architecture to a modular event-driven system using Apache Kafka.
- Implemented a Spring Boot API service responsible for authentication validation, request handling, and publishing upload events.
- Developed a Kafka worker service that asynchronously processes image uploads and stores files in Cloudflare R2 object storage.
- Designed PostgreSQL metadata schema with paginated APIs to efficiently retrieve user images and support scalable galleries.

- Implemented infinite scrolling using Intersection Observer with backend pagination, reducing client load and improving gallery performance.
- Containerized backend services with Docker Compose and deployed the system on Oracle Cloud VM with frontend on Vercel.

#### **Job Flow - Distributed Job Processing & Workflow Platform | [REPO](#)**

**Technologies:** Java, Spring Boot, PostgreSQL, Redis (Pub/Sub), Docker

- Built a distributed job processing platform for executing background tasks asynchronously.
- Implemented event-based communication using Redis Pub/Sub to dispatch jobs from producers to worker services.
- Designed worker processes that subscribe to Redis channels and execute jobs concurrently.
- Stored job metadata and execution state in PostgreSQL for tracking and reliability.
- Containerized services using Docker to simplify local development and deployment.
- Designed the system to support scalable background processing and decoupled service communication.

#### **API Gateway with Rate Limiting | [REPO](#)**

**Technologies:** Java, Spring Boot, Redis, Docker

- Built API gateway middleware with request filtering and authentication.
- Implemented token-bucket rate limiting using Redis.
- Added JWT validation for secure API access.
- Logged request data for monitoring and debugging.

### **EDUCATION & CERTIFICATES**

---

St. Clair College

Diploma in Computer Programming | 2024 – 2026

Relevant Coursework: Software Architecture • Microservices • Database Systems • Object-Oriented Design

Udemy – The Complete Full Stack Web Development Bootcamp – Instructor: Dr. Angela Yu

Completion Certificate | 2026

Focused Areas: Full Stack Development, API Architecture, Scalable System Design
